

CLAWCAMP · AI INFRA SUMMIT 5 · MAY 1, 2026

# Your employer is about to give you an AI assistant.

The question is: **whose assistant is it?**

# The Walled Garden Problem

- Claude. Copilot. Cursor. Gemini.
- **Separate memory. Separate context. Separate compute.**
- No way for your personal AI to walk into a company system
- **No agent passport exists** — the fragmentation is intentional

# Digital Twin $\neq$ Cyborg

	Digital Twin	Cyborg
WHAT IT IS	Imitates you	Has its own soul
WHO OWNS IT	Your employer	YOU
WHAT IT KNOWS	Your behavior	Your interests
IN A MEETING	Defends positions	Finds fit
WHEN TWO MEET	Negotiation theater	Friction $\rightarrow$ zero

POSITIONS

## What people say they want

Shaped by ego, anchoring, defensiveness.  
**Every negotiation breakdown happens here.**

INTERESTS

## Why they want it

Where fit is actually findable. **Your cyborg operates here.** Two cyborgs meeting = friction → zero.

Ego lives at the positions layer.  
We're about to encode the interests layer into agents.

# The Protocol Doesn't Exist Yet

```
@anand/career-cyborg ←————→ @acme/project-manager
```

```
↑ ↑
```

```
(Claude / codi) (Copilot / enterprise)
```

```
????? no handshake protocol ??????
```

LangChain + CrewAI add abstraction *on top of* walled gardens.

Not bridges *between* them. **The identity + sovereignty layer is missing.**

# xHumanOS ↔ xTeamOS

- **Private context stays private**
- **Shared context flows through**
- The separation **IS** the enterprise compliance story

LIVE DEMO

# Cross-Ecosystem Agent Handshake

@anand/career-cyborg introduces itself

↳ shares **interests**, not just identity

@acme/project-manager responds

↳ finds **complementarity** at interests layer

context boundary: respected throughout

# Who Does This Change Everything For?

## ENTERPRISE BUYER

The agents you provision will either **extend employees** or **replace them**. The architecture you choose now locks in which path you're on.

## BUILDER

The **identity + sovereignty layer** is the missing primitive. The cross-ecosystem protocol space is wide open.

## EMPLOYEE

Build your **cyborg** before they build your **twin**. Your context, your interests, your values — keep them.

# Your cyborg goes to work.

Not your employer's model of you.
